

ABSTRACT

A compound archery bow with a handle-
providing rigid riser and flexible limbs on the riser
mounting bow string pulleys has damping interconnection
mechanism between the limbs and riser. A damper is
carried by each riser inboard of a riser limb seat. A
resilient limb cup for each limb seat has portions for
engaging the bottom, side walls and inner end wall of a
limb and a fastener extends from each limb through each
limb cup and limb seat to secure the limb to the
damper.
